

Outlineoffungi.org - Note 212, *Hispidopannaria*

***Hispidopannaria* Elvebakk et al.**

Based on phylogenetic analyses of the ITS, nuclear large subunit rRNA, mitochondrial small subunit rRNA, and MCM7 genes, species previously treated as *Pannaria hispidula* and *P. isabellina* were shown to represent two new *Pannariaceae* genera, *Hispidopannaria* and *Phormospora*. *Hispidopannaria* differs from *Pannaria* in having large, geotropically arranged, hispid squamules, IKI+ internal ascus structures, and perispores with irregular pulvinate verrucae and apical extensions ([Elvebakk et al. 2020](#)) (M. Erdoğdu).
