

## Outlineoffungi.org - Note 226, [Jennwenomyces](#)

[Jennwenomyces](#) Goh & C.H. Kuo

This new hyphomycetous genus was introduced by [Goh & Kuo \(2020\)](#) to accommodate [J. navicularis](#), based on morphological and molecular data. [Jennwenomyces](#) produces dematiaceous, versicolored, straight, navicular to cylindrical euseptate phragmospores borne on multiple percurrently extending, annellate conidiophores (F. Selcuk).

### Reference

Goh T, Kuo C. 2020 – *Jennwenomyces*, a new hyphomycete genus segregated from *Belemnospora*, producing versicolored phragmospores from percurrently extending conidiophores. *Mycological Progress* 19, 869–883. [Doi 10.1007/s11557-020-01602-7](https://doi.org/10.1007/s11557-020-01602-7)
