

Outlineoffungi.org - Note 435, [Pygmaeomycetaceae](#)

[Pygmaeomycetaceae](#) E. Walsh & N. Zhang

Based on the phylogeny and phenotypic characters, [Pygmaeomycetaceae](#) was introduced by [Walsh et al. \(2021\)](#) to accommodate [Pygmaeomyces](#) in *Umbelopsidales*. [Pygmaeomycetaceae](#) is distinguished from other families in the *Mucoromycotina* by producing hyaline microchlamydospores ([Walsh et al. 2021](#)) (M. Erdoğan).
