

**Outlineoffungi.org - Note 504, *Teratospermopsis***

***Teratospermopsis* Jian Ma et al.**

Xu et al. (2021) introduced *Teratospermopsis*, typified by *Chaetendophragmia*, with *Teratosperma microsporum* as a heterotypic synonym. *Teratospermopsis protuberata*, the type species is different from *Chaetendophragmia* and *Teratosperma* by its schizolytic conidial secession, and further from *Chaetendophragmia* which produces conidia with lateral appendages arising from the middle cells (Xu et al. 2021) (M. Erdogan).
